**1. Background:**

UnitedHealthcare benefit documents define Therapeutically Equivalent as when medications/products have essentially the same efficacy and adverse effect profile. This determination is made by the UnitedHealthcare Pharmacy and Therapeutics (P&T) Committee and is not intended to imply therapeutic equivalence as defined by the FDA Orange Book.

Benefit plan designs include a prior authorization for certain prescription medications if they are Therapeutically Equivalent, defined as similar outcomes and adverse events, to a covered medication or an over-the-counter medication. Some states, including Oxford plans due to state mandates, may require a prior authorization for these medications which will require history of failure, contraindication or intolerance to another product(s) or an over-the-counter medication. For additional information on coverage please see the Physician PDL posted to UHCProvider.com.
