

Advanced illness and frailty

The National Committee for Quality Assurance (NCQA) recognizes that some HEDIS® measures may not be applicable to patients with advanced illness and frailty, particularly when the measured services may provide minimal benefit or are inconsistent with individual care goals and preferences.

For this population, care priorities may extend beyond preventive screenings or disease-specific treatments to an emphasis on coordinated care that supports the preservation of functional status and quality of life.

The implementation of these exclusions supports the delivery of care that is more appropriate and aligned with the clinical needs and health status of individuals with advanced illness and frailty.

Common frailty indications

Devices	Diagnoses	Encounters	Symptoms
Walkers, canes, wheelchairs, oxygen, humidifiers, bed-side commodes, hospital beds, etc.	Pressure ulcers, muscle weakness, falls, dependence on wheelchair, bed confinement, etc.	Skilled nursing, nursing care in the home, home health aide, respite care, etc.	Difficulty walking, weakness, age-related physical debility, age-related cognitive decline

Common advanced illness diagnoses

Malignant neoplasms Secondary neoplasms	Hypertensive heart disease Heart failure
Leukemia	Emphysema Pulmonary fibrosis Respiratory failure
Vascular or unspecified dementia Alzheimer's disease	Alcoholic hepatitis, cirrhosis, fibrosis Hepatic fibrosis Biliary cirrhosis
Parkinson's disease	CKD Stage 5 ESRD

Advanced illness and frailty exclusion overview

Pursuant to NCQA criteria, members who are 66 years of age or older as of December 31 of the measurement year may be excluded from the measures listed below if they meet criteria for both advanced illness and frailty, or if they reside long term in a nursing home. Measures marked with an asterisk (*) have variations to the applicable age requirements.

- **Frailty** – at least 2 indications of frailty with different dates of service during the measurement period
- AND –
- **Advanced Illness** – Either of the following during the measurement period or the year prior to the measurement period:
 - Advanced illness on at least 2 different dates of service.
 - Dispensed dementia medication (donepezil, galantamine, rivastigmine, memantine, Donepezil/Memantine combination)

Measures with advanced illness and frailty exclusions

Breast Cancer Screening (BCS-E)

Kidney Health Evaluation for Patients with Diabetes (KED)*

Blood Pressure Control for Patients with Diabetes (BPD and BPD-E)

Osteoporosis Management in Women Who Had a Fracture (OMW)*

Blood Pressure Control for Patients With Hypertension (BPC-E)*

Osteoporosis Screening in Older Women (OSW)

Colorectal Cancer Screening (COL-E)

Statin Therapy for Patients with Cardiovascular Disease (SPC-E)

Controlling High Blood Pressure (CBP)*

Statin Therapy for Patients with Diabetes (SPD-E)

Eye Exam for Patients with Diabetes (EED)

Persistence of Beta-Blocker Treatment After a Heart Attack (PBH)*

Glycemic Status Assessment for Patients with Diabetes (GSD)

- Please note, there are measures where the age requirement may vary
- Do not include laboratory claims (claims with POS code 81)

* Members aged 81 years of age or older, who have 2 indications of frailty on different dates of service during the measurement year, may be excluded from the following measures: BPC-E, CBP, KED, OMW and PBH
